

VITA GROW™

CONCENTRATED

Simple, professional formula helps keep plants and cuttings from wilting.

NON-TOXIC, BIODEGRADABLE
NONPLANT FOOD INGREDIENT
16 fl. oz. (473.1 ml)

Active Ingredients
45% vinyl-acrylic polymers

The Vita Grow Concentrated Anti-Wilt Spray is a foliar spray designed to keep plants from wilting when under stress. Once diluted and sprayed onto the plant's leaves, branches, stems and stalks it forms a thin biodegradable protective film. Anti-Wilt Spray protects plants from losing water during propagation and transplanting yet it allows the plant to breathe. The plant's ability to retain water is extremely important when roots have not yet formed or adverse temperatures or drying winds (hot or cold) threaten plant's survival. Also, because of its non-offensive odor it is great for cut flowers, wreaths and Christmas trees.

Directions for Use: Shake well before use. Store at room temperature. Standard strength dilution ratio: 1 part Anti-Wilt Concentrate to 7 parts water. Aggressive strength dilution ratio: 1 part Anti-Wilt Concentrate to 3 - 4 parts water. If beading occurs and product does not coat leaves, add more Anti-Wilt Concentrate to the spray bottle.

For Propagation: Treat your cutting with Vita Grow Rooting Compound and place the cutting into a moist propagating media. Completely coat the top and bottom of the leaves and stems with Vita Grow Anti-Wilt Spray. One application is usually enough, however, check the leaves to make sure a complete coat has been applied. Cuttings may be misted with water after the Vita Grow Anti-Wilt Spray has dried. Shake the bottle well before using. Store at room temperature.

For Transplanting: Water the plants thoroughly. Completely coat the upper and lower leaves and stems with Vita Grow Anti-Wilt Spray 24 to 48 hours before transplanting. One application is usually enough, however, check the leaves to make sure a complete coat has been applied. Two applications give greater protection from frost, freeze, or drying winds. Normal precipitation will not affect its tough coating. When needed reapply every 45-60 days.

Warnings: This product is non-toxic to plants and has not been identified as a carcinogen to humans by NPT, IARC or OSHA. Use this product to directions only. Keep out of reach of children. Use in a well ventilated area. Wash hands after use. Rinse from eyes with water if eye contact occurs. Call a poison control center if ingested.

Warranty: If unsatisfactory results are obtained the retail buyer shall be limited to a refund of the purchase price or replacement of product. For large agricultural users the product is purchased with no warranties or guarantees expressed or implied.
